And if you want to create a picture of your desktop, you can use greenshot to produce amazing results. Greenshot is a useful and handy piece of software that everyone should

1) Microprocessor chips, protected by a secret formula. 2) Collect data about the daily lives of millions of people, such as what you do, what you buy and what you read. 3) Use this information to advertise products, such as restaurants, movies and cars, which suit your needs. 4) Store these profiles on your own server and make money every time you see an advertisement. 5) The average Internet user has an individual profile for each website he visits. 14.05.2012 Screenshots available only in German Today, July 9, 2012, the following were released: General: - the newly released version 1.0.0.0 Fixed Bugs: - the bug in the new batch mode was fixed. New Features: - in the newly released version 1.0.0.0 we added some special tools: - You can see who viewed your page - You can see who has commented on your page - You can see who has liked your page - You can see who visited your page - You can see who viewed your page (with a more detailed display of the information) - You can see when a specific page was viewed - You can clear the page history Removed Features: - The search feature. And last but not least: If you already have the previous version 1.0.0.0 installed, you can update it by downloading the new version (German only) from: New: The search feature was removed and can not be replaced. Existing: The following features have been removed: - The search feature - The default text of the "Help" button is now "Help."Q: Dynamic cron expression I need to generate a cron expression depending on a parameter provided to the function which executes the expression. The name of the schedule should be the parameter value. For example if it's set to monday then the expression will be */10 */12 * 1-7/1-7, in other words it must be changed every Monday. I tried using the date command but I'm not able to understand how to change the time part of the date (for instance, since i have a parameter called day it should set it to every day, and the hour, minutes and seconds). Thank you in advance. A: Try using GNU date, see its 2edc1e01e8
