The Commodore 64, originally released in 1982, was a successful 16-bit home computer designed by engineer Steve Wozniak and marketed by Commodore International. A total of approximately 15 million were sold. Although intended to be an affordable and easy to use system for the average consumer, it became one of the most successful computers of all time. Although today Java SIDPlay is an emulator for the Commodore 64 it can be used to play SID files directly or emulated via a virtual machine. Features: Load SID files, but also archive, tags and etc. Game and music content by category and alphabetized. Download SID audio files of programmers, games and musicians. Recreate the classic look of the original machine. Excellent sound quality. Other features including MIDI playback, computer and other. A good example of the Commodore experience back in the day. Covers a large range of functions. Simple to use interface. Warnings: App will not work without a internet connection. Music Manuel Rodriguez Not bad, but I'm no fan of this style Dedicated Playground For tech minded players, who prefer to have a dedicated area for the game. Resources Are you experiencing any problems? or not getting the results you want? Please send your issue/problem and we will resolve it as soon as possible, or simply take a look at our FAQ first. Why Java SID Play is different? We are a group of enthusiasts who enjoy listening to SID (Sound Identification) music files. We developed Java SID Play to be a full-featured software that runs on your desktop, enabling you to experience what the Commodore 64 SID system was like when it was released in the early 80's. It's time to download a nice collection of SID tracks. What's the difference between the demo version and the full version? The demo version is just a testing version of Java SID Play. The full version comes with a huge amount of SID files which you can save as a ZIP file. Should I pay for the full version? We don't charge any money for our full version, but we are hoping you can purchase the demo version, in order to have fun with the software, so we decided to include it in the full version.
