Pain in the fingers is an inevitable side effect of the best joysticks on the market. Here, the camera's touchscreen is used for what it does best - zoom, checking focus, and change settings. Zooming in to view an image at higher resolution is much faster, and the touch controls are very responsive, which is really important when you're in the middle of a photo shoot. I'm experimenting with a high-end photo editor right now. It's not Photoshop. It's not Photoshop Elements. My goal is to be able to get results comparable to the results I'm seeing with the desktop image manipulation software. I am essentially cheating by using features that Photoshop provides, rather than learning how to use the software like a pro. But even before I started at the higher levels, I was surprised how fast Photoshop opened and how fast it allowed me to do things. I can make one or two changes in a fraction of the time it would take me to do the same in Elements or another stock-type photo editor. Photoshop isn't perfect, but it's far quicker and, frankly, easier to use than any of the other editors I've tried. Even my one-stop shop for finding and printing photos is Photoshop. Similarly, if you don't want to be tied to a monthly subscription, you can go to [ACRCloud.com](http://ACRCloud.com) and download single apps directly. 3D is an exciting area of growth and innovation for all Adobe products, but providing native 3D tools on legacy 3D APIs (OGG) is not compatible with ongoing product roadmaps, and the resulting instability has prevented 3D from reaching its full potential. 2D and 3D layers, paths and masks, and features like Filters, Strokes and Tiling live and work side-by-side seamlessly in Acrobat DC, which is now shipping today. But when working on individual image edits, Photoshop for the web and desktop, and the web and mobile experience of Persona, the 3D workflow with the 3D tools needs to be either completed in Photoshop itself, or delivered via a new native connection method that will remove the cross-platform disparity and bring clearer line of sight on clearly addressing content challenges. This also sets the stage for the creation of deep learning-based tools with Adobe Sensei powered by TBAAX, a new technology targeted at Adobe Photoshop users that personalize or improve an image based on deep learning technology to create artistic effects. These next-gen tools and operations will be available later this year. To prepare for this, Adobe plans to sunset the popular legacy 3D capabilities in Photomatrix, Compressor and the plugin API, in line with the retirements of other legacy features in Elements last year. Adobe Photoshop Lightroom for iOS Gallery, Lightroom for Android and Lightroom for Apple Watch are already shipping, with Photoshop for the web and Adobe mobile coming in the second half. Adobe is also working to bring Photoshop into the world of the physical. With DataScience--Adobe's unit dedicated to developing machine learning in Photoshop --, the company is exploring how optical machine intelligence could revolutionize all aspects of digital imaging. With both capabilities ready to be tested and employed, Photoshop for the web and desktop will be able to accelerate all of these experiences by intelligently optimizing content and providing an entirely new driver for creativity.

This includes new and updated features for GPU-accelerated real-time 2D and 3D filters, and some new capabilities that will enable you to harness a greater range of powerful 2D and 3D image creation capabilities. In short, these updates will give you incredible new ways to manipulate your images. Adobe is literally the pioneer of new, GPU-accelerated image creation features and Photoshop continues to set the pace for using those capabilities to transform your images to features that no other software can offer. On top of these new features, Adobe is also increasingly using GPU-accelerated image processing technologies for things like AI-powered enhancements color tools, you can expect even more exciting things coming in the near future. With these features in mind, Open Canvas, Adobe's revolutionary new asset management platform, will be the best way to expose your photos and assets to the best mix of capabilities from Photoshop and the built-in tools in Elements, both on the Mac and in the browser. Like any worthwhile investment, being more modern has its challenges, and the new GPU API will offer many improvements to Adobe's industry-leading Photoshop software. It will bring new levels of efficiency to the software. However, this change will be costly in many respects. It requires a fresh investment of time and effort. We spend time examining our requirements to bring the best value to the market. Every change we make requires testing, and as a result, there tends to be a spending of time and money up front. In order to keep the cost in check, we have to be very thorough and upfront about how to make the most of the changes to enable us to continue to create better Adobe Photoshop software. We work diligently to address the requirements and make our speed key and performance the breakthrough to reach our milestones. At the same time, we collide with new requirements as they are added, and we must develop those as well.
