This is equivalent to and automatically performs the same process as using the **Tagged Image Optimization Best Practices** utility found in the Optional Features tools selection. The batch process has a very important distinction: The new Optimized Hierarchy is saved directly to and used by the **Lightroom Collections** database. The same database is used by the professional and web Application Services to organize and save images that they've edited. Additionally, it now automatically renames the duplicate as a backup, and removes it after making your duplicate. This also lets you get to your next scene faster. Adobe now has a comprehensive **Crop Tool** that makes it simple to crop around an area to remove unwanted content. Just select the tool from the Image menu. You can also add to the crop box with the Append and Shape tools. Additionally, Adobe now adds a feature to the Crop tool that lets you scale the crop to the size of the canvas space or to your image's pixel dimensions. This is especially helpful if you are trying to crop around an object to remove it from a photo.
