## What's New In?

We've been looking for a Windows-based calculator that would be both elegant and efficient, would be easy to use and would fit to our needs. What we were looking for was: - to be able to set the system date and time to any of the most popular standards, in order to prevent error messages caused by a changed or wrong format - to include several ready-to-use tools to perform calculation operations, which would not require setting up additional options - to be able to copy the results to the clipboard and print them - to enable configuration of the app's output options to be changed after initial installation - to enable exporting the app's results to files and web pages - to be portable, meaning that the app does not require installation. A simple copy of the downloaded files to a custom location on the disk or to a USB flash drive makes it run in any computer effortless - to have a clean and user-friendly GUI that displays all available settings - to be intuitive. What we have found: - A small calculator that does not require any additional software to be installed and that can be copied to a custom location on the disk or to a USB flash drive - A portable tool that can be run in any computer without any modifications to the OS - A tool that enables you to set the system date and time to any of the most popular standards, in order to prevent error messages caused by a changed or wrong format - A tool that includes several ready-to-use tools to perform various types of calculation operations - A tool that enables you to copy the results to the clipboard and print them - A tool that enables configuration of the app's output options to be changed after initial installation - A tool that enables exporting the app's results to files and web pages - A tool that is intuitive and is able to be easily learned by users with no previous experience Date and Time Calculator : - Import/export of settings from old versions (first 3.0.0) - Add option to disable notification of the application Date and Time Calculator : - Add option to disable notification of the application - Remove almost all animation options - Translations (1.0.0) - Support of Chinese, English and French - Additions to the tool - Fixed small bugs - Minor improvements What is new in this version: - Version 1.0.0: - Support for Chinese, English and French - Updated menu with more options - Small changes to the UI design - Improved transliteration of Russian text - Fixed small bugs - Minor improvements Last comments from the developer Date and Time Calculator - A small calculator that does not require any additional software to be installed and that can be copied to a
